Complications such as surgical site infection, dehiscence, or even hematoma and seroma may progress into problems for high-risk patients. The PREVANA™ INCISION MANAGEMENT SYSTEM is the first and only negative pressure product designed specifically for management of incisions at risk of post-operative complications. The Prevena™ System helps draw incision edges together and may reduce the likelihood of surgical site infection and dehiscence, while stimulating perfusion, and acting as a barrier to external infectious sources. For more information, visit www.kci-medical.com.

By KCI, leaders in negative pressure therapy.

NOTE: Specific indications, warnings, precautions and safety information exist for the PREVANA™ Incision Management System. Please consult a physician and product instructions for use prior to application.
