

JUST BECAUSE AN
INCISION
STARTS OUT SIMPLE
DOESN'T MEAN IT
ENDS UP THAT WAY.

Complications such as surgical site infection, dehiscence, or even hematoma and seroma may progress into problems for high-risk patients. The **PREVENA™ INCISION MANAGEMENT SYSTEM** is the first and only negative pressure product designed specifically for management of incisions at risk of post-operative complications. The Prevena™ System helps draw incision edges together and may reduce the likelihood of surgical site infection and dehiscence, while stimulating perfusion, and acting as a barrier to external infectious sources. For more information, visit www.kci-medical.com.

By KCI, leaders in negative pressure therapy.

NOTE: Specific indications, warnings, precautions and safety information exist for the PREVENA™ Incision Management System. Please consult a physician and product instructions for use prior to application.
